

**WORKSHOP**

## OPASCA supports Global Health Catalyst

*Mannheim, 29.08.2019* OPASCA is committed to providing access to safe and efficient healthcare to people worldwide. The implementation of new technologies is an important instrument for establishing global health standards.

Therefore we support the Joint UMM-Harvard Global Health Catalyst Workshop, which is cooperatively organized by the Mannheim Medical University (UMM) and the Harvard Medical School.

On September 6th, experts from Germany, the USA, Africa and Europe will report on their work and experience on "Digitalization in Radiation Oncology" in the lecture hall of the Alte Brauerei in Mannheim.

The aim of the Global Health Catalyst initiative is to enable physicians and medical professionals from all over the world, but especially from developing and emerging countries, to gain access to new methods and strategies for the digitization and automation of radiation therapy.

We are looking forward to many exciting contributions!
