

# Digital Patient Consent

Seamless workflow integration –  
efficient and legally secure

# Workflow optimization and positive patient experience through digital patient education in radiotherapy

## Read educational questionnaires in peace and privacy

With the OPASCA Digital Patient Consent, the patient can read through the information sheets in the waiting room on a tablet and mark open questions if needed.

## Efficient educational meetings

The doctor can use the transmitted data to prepare themselves for the personal consultation and clarify the open questions for the patient. Clear anatomical drawings and digital processing options facilitate clarification on risks and side effects. When required, additional information can be added electronically. Then, the documents can be digitally signed in a legally secure manner.

## Seamless data integration

All digitally signed documents for patient education and therapy consent are immediately transferred to the respective data management system.

## Patient safety

Treatment is only possible when all necessary information sheets are available in the system.

Patient receives tablet with information sheet, ...

... reads documents and marks open questions

Doctor prepares themselves optimally for the personal consultation

Patient is called

Patient and doctor have the discussion about consent

## OPASCA GmbH
